

This engine monitoring application is a fast and practical way of getting engine and transmission information, including generic CAN Bus parameters (around 20) and diagnostic trouble codes DTC, for most J1939 engines and fixed machinery. Using the 4.3" and IP 67 display, this application is designed to support most engine models. Also, the application features fast-idle control for standard J1939 engines via CAN bus.

FEATURES

- Plug-and-play and highly configurable (without additional configuration tool)
- RPM control feature via CAN Bus
- Generic parameters and DTCs
- Supports tier 3/4 engines
- Possibility to change data for 6 analog inputs
