

PLUG-AND-PLAY SERVICE & UTILITY

An all-in-one solution that responds to all your electrical system needs. Using a CAN Bus multiplexed system, your vehicle will be at a superior level of customization and reliability. Truly versatile, CAN-Guru™ Service & Utility Truck combines simplicity and configurability. In just a few clicks, you can meet your clients' expectations without time-consuming software development and R&D fees.

Each kit includes

- I/O controller
- Interfaces
- Software
- Harnesses
- CAN communication cables

4.3in color display

12V/120V controller

Rocker switches

Thanks to the built-in characteristics of our products, your vehicle will not require any fuses or relays.

Quick and easy customization

Customize default vehicle behaviours through our **CAN-Guru™ Express** configuration software. Built to provide a user-friendly environment where no programming skills are needed, system behaviour is easily adapted.

In just a few clicks, configure parameters such as :

- Emergency light flash patterns
- Interior lights
- HVAC system
- Seatbelt alerts
- Low voltage thresholds and alerts

**Autonomous
manufacturer**

**Profitability &
growth**

**No development
fees**

**Simplified
maintenance**

Manufacturer advantages

- Plug-and-play solution
- Standardized production
- Easy customer personalization
- Fast installation
- Reduced warranty costs
- Simplified diagnostics and maintenance

End user advantages

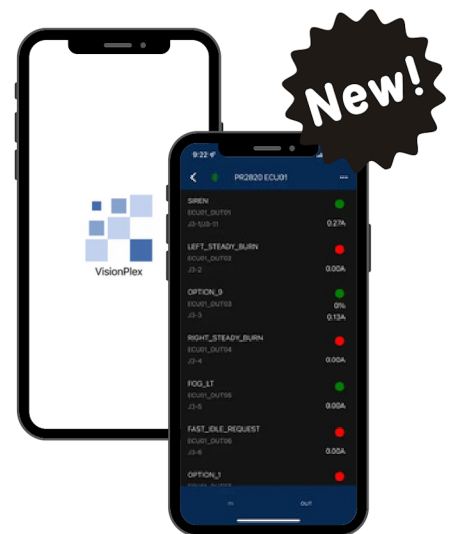

- Reduced breakdown periods
- Optimized integration and system maintenance
- User-friendly interface
- Provides more feedback than traditional switches
- Regrouped information

By virtue of its characteristics and features, this ready-to-install solution complies with North American standards.

Efficient system diagnostics

The **VisionPlex** mobile application gives you real-time access to several information on all modules of the network. This application allows both equipment manufacturers and service centers to carry out rapid and efficient diagnostics in the field.

- Intuitive platform
- Bluetooth technology
- Live data
- Network details
